INTRODUCTION

The Personal Portfolio Website is a responsive web-based project developed using HTML and CSS to showcase personal information, academic qualifications, technical skills, services, projects, and contact details in a clean and professional manner. The website is designed with a modern layout that includes sections such as Home, About, Skills, Services, Education, Projects, and Contact. HTML is used to structure and organize the content, while CSS is used to create the visual design, including colours, typography, spacing, cards, buttons, navigation, timeline, and responsive layouts. The website also uses CSS media queries to ensure proper display across desktop, tablet, and mobile devices. The project demonstrates the practical implementation of front-end web development concepts to create an attractive, responsive, and user-friendly personal portfolio

CONCLUSION

The Personal Portfolio Website successfully demonstrates the use of HTML and CSS to develop a structured, responsive, and professional web interface. The project provides an organized presentation of personal details, education, skills, services, projects, and contact information. CSS styling, grid layouts, flexbox, hover effects, color schemes, cards, and responsive media queries enhance the overall appearance and usability of the website. Through this project, fundamental front-end development concepts such as webpage structure, styling, layout design, responsiveness, and user-friendly navigation were practically implemented. Overall, the project provides a simple and effective digital platform to present professional and academic information online.
