INTRODUCTION

The Student Registration Form is a web-based front-end project developed using HTML to collect and organize student information in a structured and user-friendly format. The form contains different sections such as Student Information, Contact Information, Academic Information, Address Details, and Resume/Document Upload. Various HTML form elements including text fields, number fields, date inputs, dropdown menus, textarea, file upload, submit and reset buttons are used to collect the required details. HTML validation attributes such as required, minlength, maxlength, pattern, type, and accept are also implemented to ensure that users enter information in the correct format. The project demonstrates the practical use of HTML forms and input elements for developing an organized and interactive student registration interface.

INPUT CODE

OUTPUT

Student Registration Form

Registration ID:

Name:

Gender:

 

Date of Birth:

 

Email:

Phone Number:

Department:

Course:

Section:

College:

Address:

Upload Resume:

Submit

Reset

CONCLUSION

The Student Registration Form successfully demonstrates the implementation of HTML form elements to create a structured and user-friendly registration interface. The form efficiently organizes student, contact, academic, address, and document-related information into separate sections. HTML validation features help ensure that important fields are completed and that information such as email addresses and phone numbers follows the required format. The Submit and Reset buttons provide basic form interaction for users. Overall, this project provides practical experience in creating web forms, organizing content, and applying HTML input validation techniques for a real-world student registration system.
