INTRODUCTION

The **Alliance University College Event Webpage** is a responsive web-based project developed using **HTML and CSS**. The main purpose of this project is to provide students and participants with a simple and organized platform to view information about a college event and register for it.

The webpage includes a responsive navigation bar, event banner, event highlights, venue information, a three-day event schedule, guest speaker cards, registration form, and contact section. The website is designed to provide a clear and user-friendly interface across different screen sizes such as desktops, tablets, and mobile devices. **CSS media queries** are used to make the webpage responsive at tablet and mobile breakpoints.

This project demonstrates the practical implementation of **HTML structure, CSS styling, responsive design, navigation, forms, tables, cards, and layout techniques**. The project focuses on creating an attractive and accessible college event webpage while maintaining a structured and responsive design.

CONCLUSION

The **Alliance University College Event Webpage** successfully demonstrates how HTML and CSS can be used to develop a structured, attractive, and responsive college event website. The project includes all the major components required for an event webpage, including event details, schedule, speakers, registration, and contact information.

Through this project, practical knowledge of **HTML5, CSS3, responsive layouts, media queries, forms, tables, navigation bars, and card-based designs** was applied. The webpage adapts to desktop, tablet, and mobile screen sizes, making the information easily accessible to users on different devices.

Overall, the project provided practical experience in developing a complete responsive webpage from the ground up and helped strengthen understanding of **frontend web development and responsive design principles**.
