INTRODUCTION

The My Portfolio is a simple and responsive webpage created using HTML and CSS. It is designed to introduce the developer and display important information such as an introduction, projects, skills, and contact details. HTML is used to create the structure of the portfolio, including sections, project cards, buttons, and the contact form. CSS is used to improve the appearance by adding colors, spacing, borders, hover effects, animations, and a responsive layout. The portfolio also uses a media query to make the webpage suitable for smaller screens such as mobile devices. This project helps in understanding the basic concepts of HTML, CSS, responsive design, animations, and webpage layout.

INPUT CODE

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```

OUTPUT

CONCLUSION

The My Portfolio project successfully demonstrates how HTML and CSS can be used to create a simple, attractive, and responsive personal webpage. The portfolio includes sections for About Me, Projects, Skills, and Contact Me, which help present the developer's information in an organized way. HTML is used to create the structure, while CSS is used for colors, spacing, buttons, hover effects, animations, and layout. The responsive design ensures that the webpage works properly on different screen sizes. Overall, this project provides a basic understanding of web development, CSS styling, animations, forms, and responsive webpage design.
